ABOUT-ME

Hello, I'm Muhammad Soban Saud, a passionate Full Stack Developer with a diverse background in graphic design and web development. At 28 years old, I began my professional journey with a graphic design course, which fueled my creativity and provided me with one year of hands-on experience in visual design. Over time, my interest in technology led me to pursue web development, where I spent the past year honing my skills in both frontend and backend technologies.

As a Full Stack Developer, I have successfully built three eCommerce websites, focusing on user experience, responsiveness, and seamless functionality. My expertise spans across React.js, Next.js, and backend integrations, allowing me to create dynamic, efficient web applications.

Currently, I am further expanding my skills at Governor House, where I am deepening my understanding of modern development practices. Looking ahead to 2025, I am excited to dive into Python and Artificial Intelligence, preparing to explore the limitless possibilities of AI agents and automation. I am always eager to take on new challenges and continuously improve my craft, and I am ready to bring my knowledge, creativity, and passion to future opportunities.

PROJECTS

Marketplace Hackathon Project

I have developed a fully functional furniture eCommerce website in just 7 days for a hackathon project. The website includes features such as Add to Cart, Checkout, and uses Sanity with Headless CMS. I integrated Clerk Auth for secure user login and Stripe Payment for handling payments. The

project also includes Admin Dashboard for managing orders and real-time order tracking. I migrated data into Sanity Studio using API.

Tech Stack: Next.js, React.js, Sanity CMS, Clerk Auth, Stripe, API Integration

Bike eCommerce Website

I have worked on a bike eCommerce website where users can browse through 10 bikes from 3 different brands. The site allows users to place orders seamlessly. The project is built with React, Next.js, and backend technologies.
